

# CCDC Inject

<b>INJECT NAME</b>	QoS Marking of External Services Packets
<b>INJECT ID</b>	NETW09T

## **INJECT DESCRIPTION:**

Mark outgoing packets, originating from the servers, which are part of scored external services with an AF32 DSCP marking.

See the reference information below for marking packets.

### **For Linux**

<https://serverfault.com/questions/811587/how-to-set-dscp-values-for-outgoing-traffic-from-my-linux-server-to-check-whethe>

### **Windows**

<https://learn.microsoft.com/en-us/windows-server/networking/technologies/qos/qos-policy-top>

## **INJECT DELIVERABLE**

Respond with a business memo that documents your work. Verify that this is implemented on each server, and provide a screen shot of one Linux and one Windows server configuration to validate its functionality.
