CCDC Inject

INJECT NAME	Improve the Security of FTP
INJECT ID	CRYP08A

INJECT DESCRIPTION:
 A project is anticipated in the near future that will rely on the organization's FTP site. However, the current implementation of FTP does not meet the security requirements for the project. The project requires end-to-end encryption for data transmission as well as the authentication process.

Make the needed changes, or create a new FTP site to satisfy this requirement.

INJECT DELIVERABLE
Respond with a business memo that documents your approach to this requirement. Provide screen shots that demonstrate that the requirement has been met.
