SUBJECT: CIA of Cryptography

Dear MWCCDC,

Cryptography can bring the system to a higher confidentiality and less chances to get hacked or have any incidents that could lead to detrimental occurrences. While this technology allows for availability, it also helps with securing accounts so that minimizes that attack surface. By creating more enforcement and encryption this will increase the overall higher percentage of the service level agreement of an organization.

Please let us know if you would like further assistance in the future, we would be honored help secure any patches.

Sincerely,

Team 6
